

What Is Claimed Is:

1. An illuminated electric part comprising:

5 a manipulating shaft which is rotatable and is stable at least at two points, the manipulating shaft being light-transmissive and having a display to be illuminated at a top portion thereof; and

a light source arranged at a side of the manipulating shaft, wherein

10 the manipulating shaft has light incident faces in directions orthogonal to an optical path from the light source at the respective stable points, and wherein a coned light reflecting face having a top thereof which extends downwardly at a side thereof opposite to the incident faces.

15 2. The illuminated electric part according to claim 1, wherein the light reflecting face has a conical shape.

3. The illuminated electric part according to claim 1, wherein the manipulating shaft is tiltably supported.
